DVT & Muscle Atrophy Prevention

DVT / Plasmaflow

- Aids in the Prevention of DVT & PE
- Enhance blood circulation
- Reduce VTE related hospital readmission rates
- Safe, non-pharmacologic alternative to anticoagulants
- Aids in improving providers Total HAC (Hospital Acquired Condition) scores
- Lowers Total Cost: Bundled payment of care initiatives are driving single payment for an orthopedic episode within 30 days of surgery, including costly DVT readmissions. By reducing DVT-related expenses and potentially reducing costs for anticoagulant regimes, PlasmaFlow helps reduce the total cost of the episode.

Manaflexx

- Prevention or retardation of disuse atrophy
- Increasing local blood circulation
- Immediate post-surgical stimulation of calf muscles to prevent VTE
- Muscle re-education
- Maintaining or increasing range of motion
- Lowers Total Cost: Bundled payment of care initiatives are driving single payment for an orthopedic episode within 30 days of surgery, including physical therapy.
